

# RUBUS PHPS 8

**KEY**

## Key conditions for rubus stocks propagated by softwood or root cuttings certified/approved at Foundation (F), Super Elite (SE), Elite (E), A and *Approved-Health* (A-H) grades

**Note: All Inspections are Visual**

### 1. Inspections

All stocks have been inspected for health, vigour and, with the exception of micropropagated material, for trueness to variety. *Approved-Health* stocks inspected material for health and vigour only.

### 2. Isolation

Stocks have been grown under the following isolation requirements:

#### Aphid proof structures

All Rubus material grown in the structure must have been entered into the PHPS.

No Rosa species had been grown in the same structure as the entered material.

The structure was isolated from Rosa species by 100 metres.

#### Non-aphid proof structures

The same requirements as for aphid proof structures (above) applied, plus the isolation distances for field crops in PHPS 11 must have been met.

### 3. Standards met

A summary of tolerances (%) for pests and diseases is as follows:

	Foundation	SE	E	A	A-H
Rogues	NIL	NIL	0.5	0.5	0.5
Virus disease symptoms: Arabis mosaic virus Raspberry ringspot virus Tomato black ring virus Strawberry latent ringspot virus	NIL	NIL	NIL	NIL	NIL
Other virus diseases	NIL	NIL	NIL	0.5	0.5
Phytophthora root rot ( <i>Phytophthora fragariae</i> var. <i>rubi</i> )	NIL	NIL	NIL	NIL	NIL
Other pests and diseases including: mildew, aphids, capsid bugs, two spotted (red spider) mite and caterpillars	Substantial Freedom
